

AMENDMENT TO SPECIFICATION

Please amend the paragraph [0045] at page 13 as follows:

[0045] It will be appreciated that more or fewer processes may be incorporated into the method illustrated in Figure 3 without departing from the scope of the invention and that no particular order is implied by the arrangement of blocks shown and described herein. It further will be appreciated that the method described in conjunction with Figure 3 may be embodied in machine-accessible instructions, e.g. software. The instructions can be used to cause a general-purpose or special-purpose processor that is programmed with the instructions to perform the operations described. Alternatively, the operations might be performed by specific hardware components that contain hardwired logic for performing the operations, or by any combination of programmed computer components and custom hardware components. The methods may be provided as a computer program product that may include a machine-accessible medium having stored thereon instructions, which may be used to program a computer (or other electronic devices) to perform the methods. For the purposes of this specification, the terms “machine-accessible medium” shall be taken to include any medium that is capable of storing or encoding a sequence of instructions for execution by the machine and that cause the machine to perform any one of the methodologies of the present invention. The term “machine-accessible medium” shall accordingly be taken to include, but not be limited to, solid-state memories, and optical and magnetic disks ~~and carrier wave signals~~. Furthermore, it is common in the art to speak of software, in one form or another (e.g., program, procedure, process, application, module, logic, etc.), as taking an action or causing a result. Such expressions are merely a shorthand way of saying that execution of the software by a computer causes the processor of the computer to perform an action or produce a result.
